Mariko Kusumoto was born in Kumamoto, Japan, and lives and works in Massachusetts. Kusumoto has always been fascinated by the potential of the different materials, she manipulates the textile medium to find extremely elegant evocative forms that she incorporates into her jewels and sculptures. In her hands, the fabric takes on a three-dimensionality that is at times unexpected and a result of accidental technical experimentation – such as thermobonding – which underlines the peculiar characteristics and gives the material a new identity. Her work has received international recognition - awards, publications, exhibitions. Her works have been acquired for the permanent collections of museum institutions such as, among others, the Victoria and Albert Museum in London, the Museum of Fine Arts in Boston, the Museum of Arts and Design in New York, the Musée des Arts Décoratifs in Paris. She collaborates with designers and fashion creatives and in January 2019, her work appeared on Jean Paul Gaultier’s catwalk at Paris Haute Couture.

Fiber Art and jewels: when and how did you start using textiles for your creations?

When I entered art college in Japan, my major was oil painting. At the beginning of my junior year, I was able to choose between either an oil painting or printmaking major, so I decided to switch to printmaking with a focus on metal-etching. Metal construction had been my main focus since 1995, about eight years ago. I was always surrounded by the beauty of nature and ancient things, like the faded paint on wood and stone steps with hollows created by centuries of raindrops dripping off the roof. I was also fascinated by the elaborate metal and wood ornaments made by skilled craftsmen that were throughout the temple; polishing the ornaments in the altars was one of my chores. So I was always interested in metal.

In college I learned photo-etching techniques and I found myself more fascinated by the metal than by the images printed on the paper. After I took a small metal sculpture class, I began making three-dimensional metal sculptures. At the beginning of my junior year, I was able to choose between either an oil painting or printmaking major, so I decided to switch to printmaking with a focus on metal-etching. The main difficulty is the softness of fabric. Working with fabric sizes is not so hard and I'm able to manipulate the tile material to create jewelry.

I always feel like the possibilities are endless and ideas keep expanding. I already have so many ideas and have discovered so many things that I probably won't be able to make them all while I'm still alive.

What are the textile materials you prefer for your creations?

I like to use synthetic fiber such as polyester and nylon. They can memorize shapes when they are heated and I love that characteristic.

How do your sculptures begin and develop?

Besides being inspired by nature and the material itself, I am also motivated by the process. Almost half of my creative time is spent experimenting. During the experimental process, there is sometimes a breathtaking moment. I pay attention to these accidental discoveries, capture those moments, and develop new ideas from that point.

Great ideas often come to me, but thinking about ideas and working with the actual materials are very different experiences. I make a lot of discoveries while working on pieces that I never would have thought of in advance. Whenever I'm working on something, it often opens up new doors that drive a piece in a whole new direction, revealing more possibilities.

I often hear from people who purchased my work, "many people reacted to the piece and got a lot of compliments!" My pieces are made out of mostly polyester, but at first glance sometimes it's hard to know what the material is and how I created, because of the way I choose and manipulate the materials. My pieces look mysterious sometimes. People often say "what is it???" and then a conversation begins. As a matter of fact, ordinarily I don't wear jewelry, but one day I was walking through the crowd at a big art opening event wearing my big brooch. As people walked by me, so many of them gazed at my brooch and start asking me a lot of questions and showed admiration. I was very much surprised by the power of wearable art. That convinced me that wearable art is a tool for communication between the wearer, the artist, and the viewers. At the same time, it is also a conversation just between the artist and the wearer. The wearer purchases a piece if the artwork resonates in their heart and, by wearing it, expresses what the piece means to them. Wearable art can affect the wearer's emotion. I get comments from people saying how my pieces make them feel lighthearted, positive, uplifted, happy etc. You can not wear large paintings and sculptures. Because of the smaller scale, there are things that only contemporary jewelry can achieve and this is an interesting thing about it.

Being able to convey emotions and sensations through small works requires a marked sensitivity and highly specialized technical skills. How much and how did you cultivate one and the other? Who are or were (if any) the people or personalities you referred to or who most influenced you in your training and artistic path? You are Japanese and live in the United States. How does this double cultural richness affect your work?

I became determined to be a professional artist while still in my early teens, and I attended a high school in Japan that offered an art major with a broad range of studio and liberal arts studies. Included were sewing classes, where I initially experienced the enjoyment of working with fabric. In order to be accepted into an art college, my education was reinforced by attending a rigorous college preparatory "cramming" program (gakushu juku) following my regular school day. My combined studies were intense and highly focused, and were bolstered by my discipline. While at art college, I received a well-rounded education in a variety of art disciplines including drawing, painting, printmaking, and metalworking. Shortly after completing my undergraduate studies, I moved to the USA to continue my education, eventually settling here. Growing up in Japan and living in the USA for 30 years has exposed me to both the western and Japanese aesthetic which, enhanced by my curiosity, has broadened my view.

I am able to appreciate all art forms (architecture, graphic design, sculpture, etc.) and I regard them all as one. To me, there is no boundary between the different categories. It's hard to say who influenced me the most. I'm influenced by many artists from different fields. This wide, deep perspective has been reinforced by a solid educational background, providing me with knowledge and understanding of many different kinds of materials. My mind is very flexible, I have discipline, and my creativity is not restricted by any rules.

Projects in progress and projects in the near future, dreams to be realized: can you tell us what you are working on?

Currently I'm getting ready for a solo exhibition at the Morikami Museum in Florida, USA scheduled for 2023. I will be showing both sculptural and wearable fabric pieces. Working in a larger scale is a challenge for me, but it may also open up new doors. I believe it will take me in new directions.
